Hold Drums Securely Without Damage

Automatically Adjusts !

The MORcinch from Morse is an entirely new type of drum holder, featuring a unique cinching action that adjusts to almost any drum size. Designed to be more secure, the MORcinch embraces almost the entire girth of drums, evenly distributing the weight to maximize security of the grip and minimize stress points that can cause drum sidewall damage.

The MORcinch works with a variety of Morse drum handlers, including floor and high-lift models, lift-truck attachments and below-hook products.
