GatorJaw is the Answer!!
For manufacturing engineers and plant managers the GatorJaw framework system redefines versatility. This high-quality aluminum extrusion incorporates a one-piece fastener (none of those cumbersome T-slot inserts) with the patented square-thread design. The fastener tightens down with a quick turn using the GatorJaw tool, included with every purchase. The serrated teeth on the bottom side of the fastener bit in to hold tight.

Don't Be Mistaken!! GatorJaw is not a T-slot

GatorJaw's square thread design will lock without the need for a locking nut. You can work quickly and efficiently, tighten and loosen the fastener repeatedly without fear of damaging the threads.

With T-slot extrusions you must slide all nut inserts into place before you start assembly. This literally requires an extra set of hands to position all the pieces in place to be properly tightened.

GatorJaw goes together quickly, adjusts and reconfigures easily, and lasts forever. You can efficiently build work benches, isolation enclosures, instrument stands, specialized carts and many other items. Engineers report reduced design time, reduced assembly time and countless dollars saved in reduced man hours.

GatorJaw's versatility also gives it a significant advantage over other construction materials. Steel is heavy and requires prepainting, cleaning, welding, drilling, grinding and painting. Pipe framing requires prepainting, and like steel, there is also the issue of heat warping. Wood is susceptible to weathering.

FRAMEWORK SYSTEM 34500 Miller Ave | Fontana, CA 92336 | 800-960-1679 | Fax: 1-909-429-0267 | sales@gatorjaw.com

FONTANA, CA—The GatorJaw framework system—an aluminum extrusion using a one-piece fastener—has unveiled its new website.

The home page of the site features an embedded Flash presentation of a cabinet framework, designed and made from GatorJaw, being assembled within a matter of minutes.

The GatorJaw website also features a *Components & Kits* section, which lists in detail all the GatorJaw extrusions and components, including brackets, casters, fasteners and other items. Duane McKinnon, president of GatorJaw, added that eventually customers will be able to download engineering specs for the entire product line.

“The patented one-piece fastener designed specifically for GatorJaw is a real benefit,” said McKinnon. “Our customers report that it saves them time and money in labor hours. And the ease of assembly and design keeps GatorJaw versatile. It is an ideal product for the plant engineer who needs quick solutions.”

“Our goal is to make it easy for the enduser to design and build with our product,” added McKinnon.

GatorJaw can be purchased in bulk quantities along with hardware, based on the needs of the project, or as one of several builders' kits with enough hardware and extrusion to build an assortment of projects. To find out more about GatorJaw, call 800-960-1679, or visit the GatorJaw website at www.gatorjaw.com [1].
