## **GM Recalls 55K Vehicles To Fix Shifter Problem**

The Associated Press

DETROIT (AP) — General Motors is recalling nearly 55,000 pickup trucks, SUVs and vans because they can roll away unexpectedly.

The recall affects certain 2013 models of the Chevrolet Silverado, Suburban, Tahoe, Avalanche and Express. Also included are the GMC Sierra, Savana and Yukon as well as the Cadillac Escalade.

GM says the vehicles may have been built with faulty park lock cables or malformed steering column lock gears. The vehicles can be shifted out of park even if the ignition key is in the off position or removed. GM says about one in 1,000 of the vehicles has the problem and most haven't been sold yet.

The company says it knows of no crashes or injuries caused by the problem.

Dealers will replace the steering column free of charge if necessary.
