

# Industrial Vacuuming With A Pulse

**Camfil Farr Air Pollution Control** (APC, Jonesboro, AR) has introduced a new pulse-cleaned industrial vacuum that reduces clogs to prevent problems that result from a loss of suction during cleaning. The FarrVac operates without compressed air and may be used for everyday cleanup. The unit comes equipped with durable spun bond polyester filters that last up to 10 times longer than conventional filters, and capture dust particles to 0.1 micron. A double seal ensures rated efficiency, and a cyclonic housing design minimizes filter exposure to debris. The FarrVac uses a 170 CFM motor and operates on 120VAC, 50/60 Hz power.

For more information on the FarrVac, visit [www.farrapc.com](http://www.farrapc.com) [1].
