X-TREME Voltage-Sensing Wire Feeder

Miller Electric Mfg. Co.

Miller Electric Mfg. Co. (Appleton, WI) has introduced the new SuitCase X-TREME 12VS voltage-sensing wire feeder; a feeder designed specifically for welding in heavy-duty field applications. The new SuitCase X-TREME 12VS features a new drive motor assembly, motor control, and integrated tachometer. A new wire delivery system eases wire loading and provides minimal resistance in feeding, helping to further ensure consistent performance in MIG and Flux-Cored welding applications. Features include the redesigned placement of the shielding gas inlet (for MIG and dual-shielded Flux-Cored welding applications) to better protect the fitting from damage, and a new wire speed dual schedule feature that reduces wire feed speed to 87.5 percent of standard speed for applications such as pipe welding.
