

Chemlube® Plus Lubricants

Ultrachem

Ultrachem (New Castle,

DE) has developed a new line of high-performance synthetic lubricants, the Chemlube® Plus Series, designed to be used in a wide variety of rotary screw and rotary vane compressors. The Chemlube Plus Series is fully compatible with most OEM Rotary Screw compressor oils and can be used to top off and replace existing fluids, says the company. These lubricants are made with a very thermally and oxidatively stable polyol ester (POE) blend and were designed to take advantage of superior lubricating properties inherent in polyol esters, and yet be economical, by combining them with less expensive synthetics.

Full specifications are available for download at www.ultracheminc.com [1].
