Aluminum Wrap Around Jaws

Dillon Manufacturing, Inc.

Dillon Manufacturing, Inc.'s (Springfield, OH) cast aluminum (356-T6) wrap around type top jaws can provide minimum jaw force for thin-walled parts and distribute the gripping pressure over more of the work piece's surface - helping to maintain repetitive accuracy. This type of jaw reduces distortion and provides more friction for drive during turning operations. Dillon full grip top jaws are available from stock to fit chuck sizes ranging from 6" to 24" diameter, in standard height and extra high jaws. They can be adapted to mount manual and power chucks. Lighter weight full grip top jaws reduce mechanical stress, for improved machine and tool life, says the company. All Dillon Manufacturing products are Made in the USA.
