SLIM LED

Waldmann Lighting

The SLIM LED from **Waldmann Lighting** (Wheeling, IL) is a lighting solution for machines and equipment with space-constraints and limited installation space. The sleek profile of the luminaire is not one inch higher and wider than necessary but equipped with the latest LED technology, says the company. This allows large-scale and powerful illumination of machine workplaces and light emission direction that can be individually adjusted. SLIM LED luminaires are available in lengths ranging from 7.7" to 46" inches. Optimum light is ensured by the LINEAR-light POWER Flex, says the company, with LEDs attached to a flexible circuit board. The luminaire can be varied in length in increments of 5.5".
