NLDI Grade 2 Lubricant

Dillon

Dillon (Springfield, OH) Chucks and Jaws introduces HPG500 – a premium boundary lubricant that prevents metal-to-metal contact under high load and slow speed conditions for either high-end manual chucks or power chucks. This premium, high-performance NLDI Grade 2, lubricating grease has exceptional mechanical stability, very high load carrying capacity, and excellent water and moisture resistance, says the company. It has a water washout rating of less than 3 percent and its unique formulation provides rust and corrosion resistance, even in the presence of a synthetic and oil based coolant environment. This chuck lubricating grease handles high loads and can provide long term corrosion protection under the most hostile conditions.
