

Portable Videoscope System,

Lenox Instrument Company

Lenox Instrument Company (Trevose, PA) has announced its new Advanced Portable Videoscope System. The rugged, self-contained system combines state-of-the-art video technology, cordless operation, and compact portability at an affordable price, says the company. The Portable Videoscope System features a removable, 1.5" (40 mm) diameter, waterproof (IP67), 360-degree pan and 180-degree tiltable, color CCD camera head with built-in LED lighting that can be controlled from the system's control panel. Mounted to the end of a flexible, retractable, push rod, the camera can negotiate 90-degree bends and inspect lengths up to 98' (30 m) with the retracted push rod length sensed electronically and displayed on-screen. An optional handheld PVSK Locator can be added to the system that detects radio signals transmitted by the camera head for precise location of the camera head during borescope inspections.
