

Custom Motion Control

Lowell Corporation (Worcester, MA) has expended its capacity for designing custom motion control components, and can now provide customized solutions for a variety of applications: paper and metal processing machinery, conveyors, chain binders, and more. If a customer requires a non-standard motion control device, Lowell can typically fill the need by modifying an existing product in its line, by altering the shape or size of the drive, adding or removing teeth on a gear, or changing the configuration of a handle. In addition, the company welcomes engineers with new applications, ideas, and designs that require unique, customized manufacturing.
