'Dieing' Isn't A Grind

Dynabrade's (Clarence, NY) line of 0.4hp die grinders have been designed for precision grinding, deburring, and blending on a wide variety of materials. They are available in versions from 950 - 30,000 rpm and feature composite overmold housing, which reduces tool vibration and cold air transmission. In addition, the grinders include a muffler to reduce sound levels. Straight line, right angle, or 7° offset handle designs are available. Gear designs have higher torque levels while gearless versions offer reduced maintenance and downtime—facilities are able to pick the correct tool for their needs.

Find out more about Dynabrade's line of die grinders at www.dynabrade.com [1].
