

Nothing Is Too Complex

Omron Electronics LLC (Schaumburg, IL) has introduced its compact Trajexia motion controller module that integrates into CJ-Series PLCs to handle complex motion tasks for up to 30 servos or inverters. The module is fully compatible with a variety of processors (CJ1M, CJ1G, and CJ1H), and advanced programmable automation controllers. The Trajexia can handle up to 14 tasks simultaneously and control up to 30 axes over MECHATROLINK-II Motion bus with independent position, speed, or torque control. Digital I/Os include 16 inputs (two with registration functionality) and eight outputs (one with hardware position switch functionality).

For more information, visit Omron Electronics online at www.omron247.com [1].
