

Safe Lifting

A&H Engineering and Manufacturing, Inc. (Cerritos, CA) now offers the Shop Lift as an ergonomic solution to the problem of heavy material handling in a confined space. The Shop Lift is designed to carry up to 600 lbs. and deliver the load safely. With a gross weight of 700 lbs. and a small footprint, the Shop Lift is safer for all your workers, according to the company. The lift features a 12V electric-powered hydraulic pump with built-in battery and charger, along with 18" long steel forks. The hydraulics are rated up to 1,200 lbs., so you know they won't break. A tight 67" turning radius allows for great maneuverability around the plant.
