

Light-Duty And Pop-Up

The pop-up transfer conveyors from **TKF** (Cincinnati, OH) are light-duty units designed to handle loads up to 250 pounds with motorized roller-driven strands, eliminating noisy chain drives. The conveyors also do not use vertical guides or cam ramps for positioning, which simplifies maintenance. The light-duty model is available with a urethane V-belt, urethane o-ring, or chain strands, which can be customized to suit a particular application. These conveyors are ideal for the computer and electronic component, food and beverage, automotive, or glass industries — anywhere non-contact between product is crucial.
