

When 'Frames Per Second' Aren't Enough

Olympus (Waltham, MA) introduces the new *i-SPEED* LT, *i-SPEED* TR, and *i-SPEED* FS high-speed video cameras. The FS model is designed with a highly accurate IRIG-B time synchronization (sub 5 microseconds) and time stamping, a global shutter speed to 0.2 microseconds, and a top frame speed of 1,000,000 frames per second. In contrast, the TR model features an extensive analysis software package, which allows for automatic tracking of 64 discrete points and video frame annotation. Finally, the LT is a point-and-shoot camera that can be powered by an optional external battery, suited for capturing manufacturing applications. The LT is rugged to withstand the rigors of the manufacturing facility.

For more information on the *i-SPEED* line of cameras, go to www.olympus-ims.com [1].
