

## Keep Your Welding Fingers

The MagTab from **Strong Hand Tools** (Pico Rivera, CA) is designed to hold tabs in place before tack welding. The magnetic, adjustable V-shaped base of the MagTab allows the tool to securely hold against round, square, or angled surfaces, allowing any small metal part to be held in place. Some welders traditionally hold tabs in position with their fingers, which is a fundamentally unsafe practice—the MagTab helps provide not only a safer way to weld, but one that is more precise and steady. At just 4" in length, the MagTab can also be placed in a toolbox for use in the field.

*For more information on how the MagTab can help your welders stay safe, even in the field, visit [www.stronghandtools.com](http://www.stronghandtools.com) [1].*
