

## Remote Control Boom Crane

**Air Technical Industries** (ATI, Mentor, OH) announces the Reversible Boom Crane operation with wireless remote or pendant control that offers safety and flexibility in lifting, handling, and transporting heavy loads in most narrow passageways. The unit can be remotely controlled for all functions, including propulsion, speed acceleration or deceleration, steering, mast rotation, and more. The RBC comes in capacities from 1,000 to 20,000 pounds, with lifting heights of 24 feet. The crane is mobile as well, featuring bearing-equipped, non-marking polyurethane wheels for a smooth, quiet operation that protects the floor from scuffing. In addition, most of the crane functions are hydraulically-operated, such as the boom lift and cable lift.
