

Detect Harmful Gasses And Flames

Notifier by Honeywell (Northford, CT) has developed two new lines of gas and flame detection products designed to work with fire alarm and life safety systems in industrial facilities: Sensepoint XCD and FD Series lines. The Sensepoint XCD detector can be used to monitor industrial sites for a wide range of toxic and flammable gasses, and it provides diagnostic, alarm, and gas concentration values from multiple sensors. The FD Series detector is designed to monitor common flame emissions in high-risk industrial applications, including oil, gas, and petrochemical sites, and it offers a choice of three sensing technologies. Those technologies help detect the flame source and offer a wide range of protection against industrial fire and flame threats.
