

## Protecting Delicate Electronics

The Polyflex FR fire-resistant impregnation resin from **IMPCO** (East Providence, RI) is suitable for sealing electronic connectors, wires, and wiring assemblies against corrosion. Polyflex FR can create a permanent flame-retardant barrier that prevents corrosion-related failures by uniformly filling all gaps and pores, and will not reliquify, melt, or burn. Other features include:

- A non-VOC formula, so no special ventilation or handling is required.
- A UV-activated colorant that makes identifying impregnated components easy.
- Certification with military impregnation standards (MIL-STD 276A and MIL-STD-17563C)
- The availability of custom-engineered impregnation systems, providing all the equipment, materials, and ongoing technical assistance.
