

Making Your Motions Smarter

KolverUSA (Westford, MA) has developed the SmartMotion Linear Arm, which provides smooth positioning motion for assembly tools, such as screwdrivers, particularly when torque is involved. The arm can absorb the torque reaction while providing ergonomic support for the operator. The Linear Arms can reduce repetitive motion injury (RMI) and carpal tunnel syndrome due to their ergonomic design, in addition to preventing cross-threading and side load. The Linear Arms come in two different kits, which have different tool holders. One kit comes with a universal tool holder, while the other contains the SmartMotion tool adapter. Both kits come with the linear arm, a table stand, a tool balancer bracket, a tool balancer, and a tool holder of the customer's choice.
