

Conduits With Versatile Elbows

The Universal Conduit Elbow from **Thomas & Betts** functions as four elbows in one, resulting in the reduction of stock parts. The elbow replaces LL, LR, LB, and C conduit bodies for most applications. In addition, pulling wire is made easier because the radius of the elbow is the same as the conduit itself. The product has a wire-fill rating of 40 percent, which increases the amount of wires that can be run through smaller fittings, and the design eliminates the need for sharp, tight, and limiting bends in the conduit run.
