

Dual-Purpose Conveyors

Mayfran International (Cleveland, OH) has introduced the ConSep Flex universal chip conveyor/separator, a system that handles a range of materials while cleaning coolant at the machine tool. The system combines the features of a hinged steel belt conveyor with a scraper/drag conveyor for removing finer chips, while the magnetic bed technology captures ferrous fines such as machined cast iron. Other features include:

- An integrated coolant filtration unit, which can be specified either light oil or water-soluble coolant.
- A permanent media self-cleaning drum filter that removes up to 95 percent of ferrous fine particles by weight.
- The ability to reduce wear on machine components and tooling through the removal of fines.
