

Get Unstuck With Ultrasonic

The ROTEX ULTRASONEX Blinding Control System from **ROTEX Global** (Cincinnati, OH) minimizes mesh blinding and bridging when screening difficult or sticky materials, such as metal powders, ceramics, powder coatings, plastic resins, and more. According to the company, the ULTRASONEX system increases sieving capabilities by enabling powders to pass through screens faster. A high-frequency, low-amplitude vibration is introduced to the screening mesh to prevent particles from blinding or blocking the screen mesh. Other features include:

- The ability to screen powders through meshes as fine as 20 μ m.
- The elimination of the need for scrapers or brushes that can cause mesh wear and reduce contamination.
- Touch panel controls that enable many of the settings to be adjusted by the operator.
