

Guardrails Get Portable

Capital Safety (Red Wing, MN) has enhanced its Portable Guardrail System, an economic passive fall protection system. The guardrails can be erected in minutes, require no permanent or surface-penetrating attachments, and seal off areas and edges that are unprotected. The entire system is offered in six-foot, eight-foot, and ten-foot sections to fit a site's specific needs. Additional features include:

- Lightweight bases that incorporate ergonomic handles, four rail receptacles, and built-in toe-board brackets that allow for infinite configurations.
- A rubber pad on the bottom that provides skid resistance and surface protection.
- Easy installation, with no special tools required.
- The ability to use the system to protect roof perimeters, wall openings, skylights, manholes, and more.
