

Material Handling With Compressed Air

The Aero-Drive, from **AeroGo**, provides motor power and steering control for operators to position and control awkward, delicate, or heavy loads up to 220 tons. The unit is propelled by compressed air for safe, frictionless movement that requires no batteries or fuel, and creates zero emissions. The swing-arm steering provides 360° movement in forward and reverse modes, while fingertip controls make it easy for operators to adjust and maneuver loads efficiently. In addition, two drive units can be used in tandem for better positioning.
