

Self-Contained CNC Fixtures

The S.C.P.U. (Self-Contained Power Unit) from **Kirsan Engineering** was designed to eliminate the possibility of human error when hydraulically actuating machining fixtures. With the S.C.P.U., the hydraulic pump is integral to the fixture, and when the machining process is complete, the last tool used is then programmed to release the hydraulic press by depressing the release valve. The operator no longer has to connect and disconnect hoses and activate the pump, saving time.
