

## Faster Cutting, Grinding

The Enduro-Flex Turbo, from **Walter Surface Technologies** (Windsor, CT) uses its Cyclone technology and a unique mixture of abrasive grains, plus cooling agents, to produce a fast removal rate of welded material, not to mention a uniform finish. According to the company, the technology can guarantee a 36 Grit cut with a 60 Grit final finish, and can help reduce costs by as much as 30 percent through quicker labor. The Turbofan cooling allows the piece being worked on to stay at least 10 percent cooler, which leads to less surface damage and a longer disc life.
