

Handle 15 Systems At Once

The TransferLine — a flexible, individually-adaptable modular system that can handle up to 15 processing stations — is available from **Schleuniger** (Manchester, NH). The mechanical, pneumatic, and electrical interfaces are designed to accommodate quick and simple retrofitting and installation of add-on modules. The cable fixtures and assembly nests handle various functions in the processing of the cable and connector assembly. According to the company, the system is ideal for cutting, jacket and conductor stripping, and crimping or welding of loose piece or taped contacts.
