

## Don't 'Grieve' This Vertical Conveyor

**Grieve** (Round Lake, IL) has developed the No. 961, which is an electrically-heated, 350°F vertical conveyor, which can be used for preheating baskets of steel parts. The unit has 4" insulated walls and an aluminized steel interior and exterior, and comes with a removeable top-mounted heat chamber, plus a motor-operated vertical lift door. A 4,200 CFM, 3 HP recirculating blower provides vertical upward airflow to the workload, while ten 200-pound capacity carriers are driven through the conveyor by a  $\frac{3}{4}$  HP drive motor, which is controlled by a variable frequency drive.
