

Protect Your Products

Pres-On (Addison, IL) has developed the PBWMF-4 white masking film, which can help prevent glass, auto trim, clear-coated aluminum and other polished surfaces from being scratched during manufacturing, shipping, or installation. PBWMF-4 is a 3.0 mil polyolefin film coated with a removable acrylic adhesive, and removes cleanly from most surfaces up to one year after deployment, depending on the application. In addition, the film provides environmental resistance (-20 to 150°F) and aging properties, according to the company.
