Two Is Better Than One

The two-line intelligent panel meter technology from **Davis Instruments** (Vernon Hills, IL) — the Red Lion's PAX2A — is designed for applications in which two parameters need to be visualized at the same time, such as indicating the temperature of an oven while displaying the set point value. The unit's main LCD offers programmable colors: red, orange, and green. The meter accept DC currents, DC voltages, process signals, thermocouples, and RTD temperature sensors, and offers a universal power input as well.
