

## It's Okay To Be Over-'Bearing'

The new SGI Shaft Grounding Bearing Isolator from **Garlock** (Palmyra, NY) helps protect bearings from electrical damage, as well as from lubricant loss and contamination. It combines the technologies of the GUARDIAN non-sparking bronze labyrinth seal and the AEGIS shaft grounding ring, in a single unit. It is ideal for motors controlled by variable frequency drives. Benefits of the new product include:

- An IP56 non-contact isolation seal that withstands dust and powerful jetting liquids.
- The ability to withstand operating temperatures from -22° to 300°F.
- The AEGIS FiberLock Channel, which permanently secures circumferential rows of conductive microfibers, preventing accidental contamination of the bearing.
