Keep Predictive Maintenance On Track

The MaintenanceMaster whiteboard system from **Magnatag** (Macedon, NY) can help maintenance managers cut equipment downtime, track asset conditions, and eliminate confusion by visually scheduling and displaying a full year's preventative maintenance activity. According to the company, users can use color-coded magnet symbols on the board to show a 52-week plan, and there is a visible item T-card for each row. The whiteboards are heat-fused printed porcelain-like steel, in three sizes, for up to 148 line items. They are built for a lifetime of stain-free use and come in kits with everything needed to operate them.
