

Print Directly On Cables

Norwood Marking Systems (Downers Grove, IL) and **Kingsley Machine Company** have introduced a hot stamp printer for marking directly on insulated cables or wires that have connectors or terminated ends. The front-loading KIP-FL eliminates the need to print and apply adhesive labels or heat shrink tubing to mark cables or wires with connectors or terminated ends. The tool prints one line horizontally or vertically along insulated wire or cable, including Teflon, Tefzel, Kapton, and other materials. It can accommodate wire and cable sizes from 0.25 to 0.75" in diameter.
