

Safely Saw It

Reed Manufacturing (Erie, PA) announces the addition of two new models to its SawIt® line. SAWITSD and SAWITD pneumatic saws feature immediate shut down when throttle is released and immediate start up with throttle squeeze. On the SAWITSD version only, a trigger lock prevents accidental “on” if the trigger is bumped or pressed unintentionally. Able to be used for hard-to-reach applications, Saw It cuts plastic (even C-900 PVC), steel, and stainless steel with minimal 6” clearance beyond the pipe to accommodate blade movement. It also cuts up to 20” (500 mm) diameter pipe with a single set-up, or cuts larger diameter pipe with optional chain extensions and several clampings.
