

Strike-Free, Heavy-Duty Wrenches

The new strike-free wrenches from **Wright Tool** (Barberton, OH) can be used for heavy-duty applications, where striking-face box wrenches cannot be used and where cheater bars should not be used. The wrenches also loosen and tighten large fasteners in confined areas where there is not enough room to swing a striking tool. They are available in 2' and 3' handle sizes, with 12-point wrench openings ranging in 17 sizes from 1" to 2" in diameter. These new tools join a complete line of more than 4,000 hand tools from Wright.
