

A Chuck For Air

Northfield Precision Instrument Corporation (Island Park, NY) has introduced the Model 450 Air Chuck, which installs on the bed of the customer's machine. The pick-and-place arm picks up the parts after they are finished in the front chucks and transfers them to the rear chucks for finishing. The Northfield designs work with any lathe, boring machine, grinder, or VMC. Models include through-hole, high-speed, and quick-change. They are available in SAE or metric, in sizes from 3" to 18". Accuracies of 0.001" to 0.00001" are guaranteed.
