

Thermoplastic Purging Gets Easier

The **Dyna-Purge Division** of Schuman Plastics, Inc. (Depew, NY) has introduced the improved Dyna-Purge M, which is a non-abrasive, non-chemical engineered thermoplastic purging compound. It is formulated to flow naturally through the barrel and hot runner system of an injection molding machine, as well as extrusion equipment. The purging compound features enhanced cleaning power with two ingredients that scrub, while a proprietary additive helps remove contamination without leaving a residue.
