

Challenge Your Heavy-Duty Cranes

The SMARTON crane system is designed for optimum flexibility and reliability in challenging environments, with a compact design that allows industrial halls to be smaller than before. **Konecranes** (Springfield, OH) has developed the cranes with capacities from 160 to 500 tons, which makes them ideal for automotive and general manufacturing, automatic storage systems, workshops, and more. Other features include:

- A regenerative network braking system that feeds energy back into the power grid.
- A space-efficient design that prevents the need to invest in auxillary hoists.
- Anti-sway technology that automatically prevents the load from swaying, and adjustable working limits for safety.
- A HIM system that shows load location, load tonnage, approaching area limits, and target position.
