Cheaper, Lighter-Duty Casters

Colson Caster Corporation (Jonesboro, AK) has introduced two new caster lines to serve lighter-duty markets. The first two sets of its new low-cost casters include the L Series for light duty and the G Series for more general applications. The L Series offer a 150-pound capacity and come in 2-5" wheel diameters. The standard models are equipped with riveted axles, plus a full double ball bearing raceway construction for better performance and durability. They are zinc-plated for corrosion resistance and environmental ruggedness. The G Series hold up to 350 pounds in 2-4" wheels. Both are NSF-approved and RoHS-compliant.
