

Sanitary Solids Handling

Material Transfer (Allegan, MI) has developed the Sanitary Stainless Steel Hydraulic Container Dumper, which discharges containers of food products into an existing hopper at 63" above floor level. The unit has a sanitary, wash-down duty, tubular 304 stainless steel construction with continuous TIG welds, and no tube penetrations. The dump carriage features a pipe bottom and openings to allow debris to fall through. The included equipment includes stainless steel machine guarding, PLC controls, and a color touch screen operator interface.
