

Vacuum More With Less

Piab (Hingham, MA) has launched its piCOMPACT10 range, the manifold-mounted and functional ejector system based on MICRO COAX technology. Products in the piCOMPACT10 range are ideal for pick-and-place operations where efficient handling of small, heavy parts is crucial. By using Piab's MICRO COAX cartridges, the new range provides three times more vacuum flow, resulting in substantial sustainability benefits, as well as energy and cost savings. Additional features of the system include:

- An energy consumption reduction of 30-50 percent when compared to traditional ejectors.
- Strengthened product grip, which allows machines to increase pickup speed, minimize product damage, and reduce waste.
- The use of compressed air at lower pressure while offering high performance, which allows the piCOMPACT 10 range to be used with delicate products.

Visit www.piab.com [1] to get additional details on the system.
