

Classic Vacuum Pumps Get Better

The piCLASSIC vacuum pump series, from **Piab** (Hingham, MA), is based on COAX technology and is suitable for a wide range of applications with large capacities. According to the company, it has an initial high amount of flow, which means there is no need for expensive vacuum tanks and valves, and by using compressed air, it is easy to turn on and off, saving energy. Three options are available based on a user's specific application:

- Xi — Best vacuum flow, suitable for non-porous applications when a deep vacuum level is needed.
- Si — Recommended for leakage is a significant factor, such as packaging.
- Pi — A low feed pressure of 45 psi for components that are sensitive to high pressure.

To get more information on the series, go to www.piab.com [1].
