

# Gas Alarms With Many Channels

**Oldham** (Arras, France), an Industrial Scientific company, introduced the WX Series of gas detection alarm controllers with three models: WX4 (four-channel), WX16 (16-channel), and WX64 (64-channel). Each model is designed for continuous monitoring of its respective number of analog or digital gas measurements. All of the models can be configured to receive and transmit gas readings wirelessly, providing wiring cost savings and application flexibility. Other benefits include:

- Two RS-485 ports, programmable relays, a backlit LCD, and 24-hour data logging on the WR16 model.
- A color display, data logging via a 2GB SD card, and an embedded web page that enables remote viewing on the WR64 model.
