

Get A Better Look At Belt Drives

The Witte Co. (Washington, NJ) has developed clean, Lexan belt drive guards for its fluid bed dryers, coolers, screeners, conveyors, and other vibratory equipment. The guards fully enclose the belt drive system to prevent contact with the drive belt, promote worker safety, and aid compliance with OSHA requirements. They also allow process engineers, maintenance managers, and other operations professionals to monitor the condition of the belt and identify signs of wear without requiring line shutdown.
