

Keep Oil In Check

The OILMISER Vapor Guard from **JLM Systems Limited** (Richmond, BC, Canada) is designed for lubricated gearboxes and bearing housings that are venting to atmosphere. The guard traps the migrating oil mist from a turbine gearbox before it escapes, before it fouls the air breather, and before it contaminates the workspace. It comes in two configurations: the OVG-6200 standard length version, and the OVG 6220 double length version. In addition, they have no moving parts, no consumables, and require no maintenance beyond a visual inspection.
