

Liquid-Friendly Thermostats

Selco Products Company (Reno, NV) is offering a line of Immersion Thermostats to meet requirements for challenging applications where the temperature control device must be submerged in water or other liquids. Typical applications include pressure washer equipment, industrial steam cleaners, industrial water heaters, and more. The CPO/CPC and SIC/SIO thermostats feature a temper-proof factory bimetal switch with operating temperature ranges from 41°F to 500°F and a pressure rating of 500 psi. The construction is an overmolded, one-piece brass or stainless steel, which makes it moisture-proof in either hot or cold conditions.
