

Put Material Handling Overhead

The overhead bridge crane kits from **Demag** (Cleveland, OH) are a quick and cost-effective solution for installing overhead cranes in the 3-, 5-, and 10-ton capacity range. According to the company, the kits are plug-and-play, require no electrical work, and include everything needed for installation, save for box girders or steel beams. They are available in either top-running or under-running configurations, and include a wire rope hoist, end trucks, a bridge panel, and more. Demag claims that installations are typically completed in less than 21 hours.
