

Quickly Disconnect Motion Control

Siemens Industry, Inc. (Atlanta, GA) has announced the introduction of Speed Connect, which is a new quick-release mechanism that protects against vibration shakeout on the company's Motion-Connect line of power and signal cables. The Speed Connect release makes installation faster, because the disconnects are entirely tool-less, according to the company. All the cables are system-tested to guarantee performance in any motion control system, and are fully shielded to prevent EMC noise emissions and protect the system from ambient environmental noise.
